Initially, in Omaha every player gets four hole cards fairly than two in Texas per Omaha poker strategy card. Next of all, one should apply two of the four hole cards, all along with three of the cards on the board (the community cards), while creating a hand.

In Texas Hold'em it is probable to apply one, two or not any poker strategy card (play the board) of the hole cards but in Omaha the 2 pocket plus 3 from board rule is compulsory and you have to make your poker strategy card accordingly.

Examples

Example: 1

The board: 10-7-2-3-K

In Hold'em: those players having a Heart currently contain a flush. Any player having the A currently holds the nuts (the finest probable hand); the Q will provide the second nuts, and thus forth.

In Omaha: any player having a flush must have at least two Hearts amongst his hole cards. You do not hold a flush if your hand contains only one Heart. Any A-xh-x-x combination will be the nut hand.

Example: 2

The board: 7-8-9-T-J:

In Hold'em: each player holds a straight 7-J. Any player having a Q has a straight (8-Q), and any player having a KQ has the nuts (a straight 9-K).

In Omaha: You should apply two cards from your hand to make a straight. A 5-6-x-x creates the minimum straight (5-9); a K-Q-x-x creates the maximum straight (9-K). A 7-8-x-x, 8-9-x-x, 9-T-x-x, T-J-x-x, J-7-x-x, and so forth, creates the J-high straight. Any Q-J-x-x, Q-T-x-x, Q-9-x-x or Q-8-x-x will make the Q-high straight.
