

Why Poker Bots Don't Work

Contributed by Administrator
Sunday, 13 December 2009

People who are not able to concentrate for long periods of time should stop and read this single statement: So-called "free" poker bots are NOT worth your time and WILL cause you to lose money. The Ugly Side of Poker Bots Do not download these software packages. Even if you do find one that is not ridden with spyware, there are certain regulations for all of them that will exploit you as a player. Most will only work with a small group of online casinos and require you to create an account there. When you create an account, the maker of the bot will receive a portion of your rake for as long as you continue to play at the site. Alternatively, you can use a secure and reliable rakeback operator to handle your accounts at all sites. Many times a good rakeback provider will be able to return up to 35% of the rake paid while playing. Even with a profitable bot, the amount of money lost by giving up a slice of your rakeback is unacceptable. Much better profit margins can be had by using a well-regarded software such as winholdem or Pokerbot Pro. These have a much wider list of accepted online sites and you can still receive rakeback while using them. Even a bot that stays even will generate thousands of dollars in rake over the course of a year.
